Education

2016–2019 **Bachelor degree**, *FUMEC University*, Belo Horizonte - Brazil, *Computer Science*

About me

A dedicated software engineer with 10 years of experience in software development. Throughout my career, I have used multiple programming languages, including Java, Node.js, Python, and more recently Clojure, adapting with ease to different architectures and workflows. Always been involved in all stages of the software development lifecycle, from system design and architecture to implementation, deployment, and ongoing maintenance, always focusing on building scalable, reliable, and maintainable systems.

Experience

2022–2026 **Senior Software Engineer**, *Nubank*

Worked on large-scale financial systems in the Investments domain, dealing with high-throughput, low-latency workloads, complex third-party integrations, and high data consistency requirements. Made integrations with FIX and SOAP protocols, processing high-volume batch and real-time data, and applying concurrency control, idempotency, and fault tolerance. Strong focus on observability and scalability, using Clojure, Kafka, Kubernetes, Datomic and DynamoDB databases, and monitoring stacks to support systems serving millions of users daily.

2019–2022 **Back-end Developer and Team Leader**, *Seidor Veritas*

Leading the team responsible for the maintenance and evolution of tax documents issuance module (Outbound) from Orbit by Seidor platform. Designed and developed REST micro-services and AWS Lambdas using Node.js and Java 8. Development heavily focused in automated tests (unit and integration tests) and API documentation since the API is used by external clients; Responsible for the deploy of the whole infrastructure using Infrastructure as Code (aws-cdk). Infra composed by Elastic Beanstalk, ECS, Fargate, Lambda, API Gateway, and more.

2018–2019 **Full-stack Developer**, *Melhor Voo*

Developed various web pages and components using Node.js, React.js, Redux and JSS; Designed and implemented RESTful APIs using Express.js, Laravel and Django Rest Framework; Worked with MySQL and MongoDB databases; Developed web crawlers using Node.js and Python;

2016–2018 **Full-stack Java Developer**, *Registrocom.com*

Developed mostly web applications using Java 7, JSF 2.2 and 2, Primefaces 6 and 3, JPA (Hibernate and Eclipselink), MySQL and Apache Tomcat 8.

Knowledge

Frontend React, Primefaces, Flutter

Backend Node.js, Java, Clojure, Python

Frameworks Express, Fastify, Django, Flask, Spring Boot

Databases MySQL, Postgres, MongoDB, DynamoDB, Datomic

Infra Kubernetes, Kafka, RabbitMQ, AWS SQS, AWS Lambda, AWS ECS, AWS EC2, AWS S3

Other Prometheus, Grafana, Splunk, Linux, Git, Scrum, Automated Tests

Languages

Native in Portuguese and full professional proficiency in English
